ENGLISH

COMFORT

The ergonomic and flexible design of CHC Lab products allows the researchers to work in a safer and more comfortable way in any laboratory environment. The modularity of our system permits a fast and cost-effective re-arrangement of the lab design and furniture allocation when required.

A photograph of a modern laboratory workstation. It features a white countertop with a built-in sink. Above the counter, there are multiple levels of white shelving. On the counter, there is a laptop displaying a website, a small white container, and some glassware. The background is a plain white wall.

Lab Furniture Products

LEVEL PRO

LEVEL PRO furniture system allows maximum flexibility, coupled with an elegant and modern design. The system features fit perfectly in any dynamic and fast-changing laboratory environment.

• System Description

In order to respond to the needs of a well-designed laboratory, such as a functional and flexible services distribution system, CHC LAB developed LEVEL PRO.

Our services spine, based on easy dismantable, interchangeable and combinable panels, allows for any type of changes in the distribution of taps and electrical components.

The system allows for any services access point, whether from the ceiling, using a drop in the column, or from the floor. The spine can adapt easily to any new requirement arising after the installation without involving any costly and time-consuming change in the facility services distribution and connections. The Modularity of the system allows for a fast and easy re-allocation of the furniture in any space of the building.

Design Breakdown

• Spine Option

Service panels can be combined in different configurations in order to ensure a versatile workspace.

1st ONE ROW OF PANELS : Combination of service panels with shelves (max. 3 levels of adjustable shelves).

2nd SERVICES WALL : Ideal for heavy serviced areas allowing for multiple equipments connected simultaneously.

3rd LOW SERVICE SPINE : Allows for services at worktop level and useful to enclose services running along the walls.

Ergonomics

• 4 Levels height-adjustable lab table

※The distance between floor and work surfaces is 750mm, 800mm, 850mm and 900mm

Sitting position, Distance from floor 750–800 mm

Standing up position, Distance from floor 850–900 mm

Easily Adjustable independent height shelves.

Flexibility

- **LEVEL PRO Services module**

Easily interchangeable service panels. Allows for multiple combinations of taps and sockets depending on needs and requirements.

- **LEVEL PRO Skirt panel**

LEVEL PRO skirt panel has a safe and clean design. Can be easily removed, allowing for fast maintenance operations.

- **LEVEL PRO Choice of colors**

HARD PRO

HARD PRO bench type system is the right solution for heavy duty, less serviced and less changing laboratory environments. Ideally for lab environments with well established procedures.

• System Description

To respond to the requirements of a strong and heavy duty laboratory environment, CHCLAB created HARD PRO system.

With a simplified and still ergonomic design, this system ensures durability and sturdiness in all those laboratory spaces where heavy equipment and more consistent and standard processes are required. Safety is increased through a separation of services lines, one for electrical devices and another for taps, while the ergonomics are maintained by the dual adjustment independent shelves system.

Durability

- **Utility box**

STEEL epoxy coated utility box. Ample internal space for installation and connection of several services.
Easily removable PVC strip for easy access for maintenance and control purpose.
Sturdily attached to spine pillars to avoid bending and twisting.

- **HARD PRO frame type**

STEEL or ALUMINUM «H» frame type
Tubular 50 x 50 structure, epoxy coated
Horizontal and vertical structure welded together to ensure high load capacity.

- **Skirt panel**

HARD PRO skirt panel, Easily detachable, steel epoxy painted, ensures safety, protects services connections from exposure and allows for easy maintenance and cleaning.

- **Levelling feet**

Levelling feet allow perfect vertical and horizontal level of the table structure.

- **Multipurpose drop-in pillar structure**

The CHC service system counts with a structure of multipurpose epoxy coated steel posts that work both as a structural element, providing unbeatable sturdiness and stability as well as a services drop. Internal width allows the installation of both electricity, data or gases. Easily removable PVC strip for easy access for maintenance and control purposes. Sturdily attached to the table frame to ensure the stability of the bench structure.

- **Safety independent shelves**

Independent shelves table	Safety	Integrated shelves table	Hazard
<p>Each shelf can be adjusted independently. Easy to create appropriate and safe space on the table for large equipment.</p>			

Ergonomics

- Ergonomic dual height adjustment system
- Shelf surface options

The dual height adjustable system enables not only to arrange large equipment but also to store the reagent bottles of various sizes with convenience and safety by adjusting the height of the shelves.

	Type	Tempered glass	PB	Phenolic laminate
HARD PRO	Steel	Option	Standard	Option
	Aluminum	Standard	Option	

Tempered glass

The tensile strength of tempered glass is 3 times stronger than normal glass. It has excellent chemical resistance, allows natural light penetration for better desk illumination and permits immediate detection of contamination and leaks of reagents.

Particle board

With an excellent chemical, temperature and physical resistance, it is a very versatile solution.

Phenolic laminate

With increased chemical resistance through L.P.M treatment is a very cost effective solution

- Safety prevention through design(Ptd)

Detachable anti-drop bar :

Can be easily attached and detached by the user.
Prevents accidents that can occur when a reagent bottle hits the bump.

Back lip :

Prevents reagent bottles to fall down from the back side.

SINK BOWL

Polypropylene

Basic

Provides exceptional physical and chemical resistance. Required in medium to heavy -duty laboratory environments.

Epoxy resin

Option

Smooth and light material, excellent chemical resistance including hydrofluoric acid, Easy to maintain and clean.

Stainless steel

Option

Two quality options for stainless steel (304 and 316). Excellent mechanical properties, corrosion resistance, heat and cold temperature resistance.

Exhaust System Products

EN 14175

ASHRAE 110-2016

Fume Hood

The Fume hood is an essential equipment to secure the safety of the researchers as well as the laboratory environment from the harmful substances and contaminated gases. CHC Fume Hoods have been gradually improved to comply with the strictest international standards, such as ASHRAE 110-2016 and EN-14175. The highly detailed technical construction and quality of the materials used ensure safety of the end user at any time.

Structural Features

SAFETY

• AirFoil

Enables smooth flow over the work surface to prevent turbulent top levels turbulences
Prime fume hood models include a 6 inch grid that improves safety and collects potential spillages.

• Sash Lock

The Fume Hood sash is mechanically stopped at 500mm height to prevent the exposure to harmful substances or unexpected explosions. The sash stop can be easily removed using just one hand.

Sash lock is conveniently positioned on the sash frame.

If sash needs to be opened more than 500mm, push the lock when opening.

• Dished work surface

Raised edge worktop molded with seamless joints prevents spillages and avoids exposure to harmful gases and vapours.

• ELB(IP54)

Easy and safe to handle due to its frontal location, using the IP54 grade cover.

• Safety Gas Valve

Push-turn type valve prevents misuse and increases to ensure safety.

ECO

• Combination Sash

〈 SASH OPTION 1 〉

〈 SASH OPTION 2 〉

[SASH OPTION 1]

One piece sash for full visibility.

[SASH OPTION 2]

Sliding windows to allow easy and safe internal operations without opening up the sash.

• PIR SENSOR(Optional)

A PIR sensor, equipped with infrared detection rays, connected to the motorized sash, detects the movements of the users and automatically closes the sash when nobody is using the Fume Hood.

Setting time for automatic door closing can be customized. This function reduces energy consumption and improves safety.

CONVENIENCE

• Scaffold Holder

Stainless Rack & holder

Scaffold Holder

PP scaffold support with strong chemical resistance. Holds the Stainless steel Rack firmly and prevents corrosion. Easily dismantled for cleaning operations or to be replaced when needed.

• Built-In Cabinets

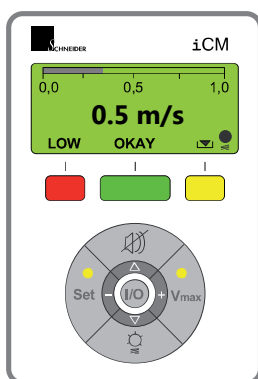

Depending on the laboratory environment, built-in safety cabinets or standard cabinets can be installed under the fume hoods, maximizing space utilization and improving safety.

• Fume Hood Montior

[CHC CONTROLLER KEY FEATURES]

- Adjust damper opening or fan speed (inverter option) depending on the position of the sash to keep constant exhaust volume.
- Face velocity display
- Emergency Exhaust System that opens the damper completely, independently of sash position, allowing maximum exhaust of harmful substances.

[SCHNEIDER CONTROLLER KEY FEATURES –OPTION]

- Extensive applications module.
- VAV sensor module can be installed to automatically control face velocity.
- Automatic sash control via PIR sensor module. Possibility to Set maximum sash opening.
- Sash closing automatically when nobody is using the fume hoods to save energy and ensure safety.
- EN 14175 complying

VAV SYSTEM

Lab Safety & Energy saving

Variable air volume

The automatic face velocity control, maintains constant face velocity regardless of the sash position. It ensures the optimal fume hood performance and energy efficiency by reducing the air flow rate when the sash is closed.

Constant air volume

Depending on the sash position, the face velocity of the fume hood will change. It exhausts the same air volume at all times providing lower performance as the face velocity varies.

ASHRAE 110-2016

EN 14175

Face velocity test

Inflow air velocity is measured in sash opening positions, 20%, 50% and 100% (Avg inflow velocity $0,45 \pm 0,05 \text{ m/s}$)

Smoke visualization test

By generating smoke at the fume hood front section, it checks the presence of vortex and turbulence.

Trace gas containment test

Tests gas leakage by gas sensor. (less than 0,1ppm)

EXTRACTION ARM

Ensures the safety of extraction arm laboratory environment, exhausting contaminated air in a specific local area.

Features

360 Degree swing

The head of the arm hood can be rotated 360 degrees.

Arm holder

The "O ring" ensures stability and prevents gas leaking.

Damper

Manually adjustable damper depending on users needs.

Unit : mm / Ø

Extraction ARM & Bracket

Movable Extraction ARM

ERGONOMIC LAB CHAIR

Bimos European laboratory chairs provide maximum comfort due to their ergonomic design and as well as long lasting use due to their heavy duty construction.

STORAGE CABINET

Easy maintenance and improved resistance to acid attacks.

Chemical and Corrosion Resistance

Eco-friendly E0 grade PB internal shelves that ensure better resistance thanks to the phenolic laminate finish.

Triple Filtering System

CHC Hybrid Filter is economical because it removes acid, basic and organic gas with one filter.

CLEAN STORAGE CABINET

Closed type

Airflow

- Hybrid filtered air
- Contaminated air

		C-CLO-800F	C-CLO-800I
Dimensions	WxDxH(mm)	800 x 500 x 2000	
Material	Inner / Outer	Inner : Phenolic laminate 4t / Outer : Phenolic laminate 6t	
	Door	Acrylic(Brown color), 5t	
Performance	Wind speed (m/s)	0.47	
	Noise (dB)	46 dB/A

bioall Products

BIOSAFETY CABINET

Ensuring perfect containment provides protection for researchers, samples and environments. The high-quality materials used and the modern design make our product one of the best in the market.

SASH LEVEL Door Alarm

- The built-in sash level alarm function designed for user convenience and safety will alert when the sash level is higher than the one set for safe use.

Intake Grille & Armrest

- Wide Intake grille and air holes eliminate the risk of cross contamination, both inside and outside the workbench.
- Wide armrest ensures ergonomic work position.

Dished Work Surface

- The raised perimeter single-plate workbench prevents liquid spillage.
- The work surface is easily removeable for easy cleaning and maintenance.

● High Performance Blower

- Stable airflow guarantees low noise and vibration-free operation performance with optimal balance and reduced energy consumption.

● Ergonomic Design And Double Junction Glass

- The 10-degree tilted ergonomic design of the sash reduces glare allowing a full clear view of the internal chamber.
- 6,38mm laminated double glazing (EN 12469 and NSF / ANSI 49 standards certified product)

● Utilities

- The differential pressure gauge is checked in real-time inside the plenum.
- Basically includes one utility valve as standard, and can be installed up to four.
- The electric sockets provided as standard are 220V with safety covers, located on the left and right sides. They can be changed to 110V upon client's.

● Non-Filtered Air Protection Hole™

- Prevents the inflow of contaminated room air into the internal chamber.

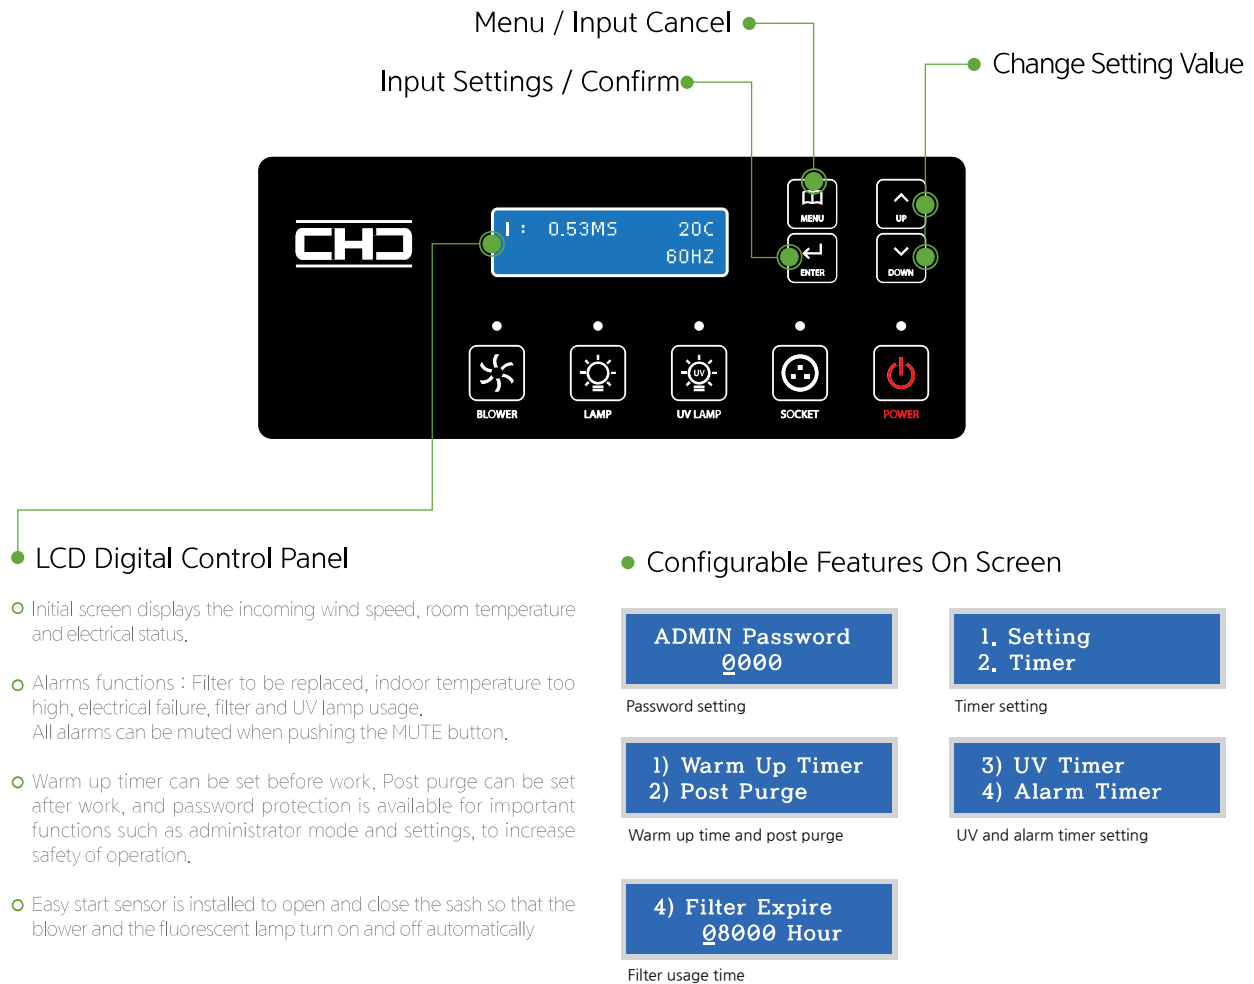

● Threshold structure & UV light Leak-free guard

- Armrest and threshold structure ensures that the intake grille's airflow is not obstructed by the user, Completely blocking the UV leakage into the floor gap when the door is closed and the UV lamp is turned on.

Control System

A single control system enables all BSC operation control such as power ON-OFF, blower ON-OFF, lamp ON-OFF, administrator password setting, timer setting (including UV), warm-up and residual air removal time setting.

Paper Trap

A paper Trap is installed to prevent external objects to fall on the work surface or being sucked by the blower into the HEPA filter.

HEPA filter eliminates the fine particles of $0.3\mu\text{m}$ by 99.997%

* Graph that shows particle interception efficiency of HEPA filter.

Filteration System

Filtering system consists of one Supply filter and one Exhaust filter.
Internationally recognized HEPA filter is applied to ensure performance.

Advantages

Low pressure drop
Higher flow rate
Longer operating life
Individually tested according to EN 1822

Description

Frame	Anodized extruded aluminium
Gasket	Polyurethane endless at inlet
Media	Glass fiber paper
Separator	Hot-melt beads
Sealant	Polyurethane
MPPS efficiency	H14 \geq : 99.995%
EN 1822 filter class	H14

LAMINAR FLOW CABINET

Provides product protection from airborne particulates and cross contamination. Available with horizontal or vertical laminar flow, provide a HEPA-filtered environment.

Design

CLB-201 & CLB-201S

Width	1040/ 1340/ 1650/ 1960mm
Depth	742mm
Height	1230mm
Frame height (Leveling caster)	705/805mm

<Top View>

<Front View>

<Side View>

HEPA filter

Differential pressure gauge

Electrical receptacle & Utility valve

Conveniently allocated inside the work chamber, Electrical socket provided with protection cover for safety. Up to four valves can be installed.

Leveling caster

Allows easy movement of the cabinet and perfect leveling. Improves load capacity safe break function.

LCD control panel

Full controlling functions display.

Laminar flow cabinet and Biological safety cabinet differences

By usage purpose

Laminar flow cabinet provides only product protection for the researcher.
 Biological safety cabinet provides personnel, product and environment protection

By airflow

Laminar flow cabinet

Clean air through HEPA filter flows inside the chamber and protects products from contaminated air.

Biological safety cabinet

70% of the airflow at workspace is re-circulated through the HEPA Filter and 30% of it is exhausted to the outside through HEPA filter, and the polluted airflow is not leaked as it is perfectly surrounded by the negative pressure.

By product

The product classified as BSL 1, harmless to human will be treated in laminar flow cabinet, and the product classified as BSL 2 or 3, high risk to human will be treated in biological safety cabinet.
